Attorney Docket No. 062072

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions of claims in the application.

Listing of Claims

Claim 1 (currently amended): Silica-filled rubber granules wherein the granules are

comprised of dried granules of a cocoagulation product of rubber and silica having an average

particle diameter (D50) of 300~3000 μm and a weight ratio of the granules within the range of

D50±(D50×0.5) is at least 50% by weight, and wherein the granules having a sphericity of at

least 0.6 determined by a ratio of the major axis (D_L) and the minor axis (D_S) of the granules (D_L)

 $\underline{\mathbf{D}}_{\mathbf{S}}$).

Claim 2 (currently amended): Silica-filled rubber granules according to claim 1, wherein

a weight ratio of the granules within the range of D50±(D50×0.5) is at least 80% by weight-and

the particle is approximately spherical.

Claim 3 (original): Cross-linked rubber obtained by cross-linking the silica-filled rubber

granules according to claim 1 or 2.

Claim 4 (withdrawn): A process for producing silica-filled rubber granules which

comprises supplying a cake of a cocoagulation product of silica and rubber having a water

Amendment under 37 CFR §1.111 Application No. 10/568,393

Attorney Docket No. 062072

content of $40 \sim 80\%$ by weight to a drier provided with an indirect-heating type container

equipped with stirring wing blades, stirring the cake while applying shearing force to the cake

with the stirring wing blades, and then drying the cake.

Claim 5 (withdrawn): A process for producing silica-filled rubber granules according to

claim 4, wherein the cake is divided and fed to the drier.

Claim 6 (withdrawn): A process for producing silica-filled rubber granules according to

claim 4 or 5, wherein the clearance (t) between the stirring wing blades and the wall of the

container is adjusted to $2\sim50$ mm.

Claim 7 (new): Silica-filled rubber granules according to claim 1, wherein the sphericity

is at least 0.68.
